

OUR CONTRIBUTION

Vatorex contributes to the UN Sustainable Development Goals (SDG). We have defined the fields where we can create the most impact and therefore generate the most value on a global scale. We know well that all our acting has consequences and influence on other SDGs as well.

HOW WE ACT

**Life on land:** Bees are essential to biodiversity. Without bees there is no pollination, no plants, no life. No life on land.

**Zero hunger:** As bees are important pollinators, they help to sustain agriculture and food supply.

**Climate action:** Bees help plants to grow. This leads to more bound CO<sub>2</sub> and less fertilizer use.

**Good health and well-being:** Our solutions reduce chemical residues in wax and honey.

**Responsible consumption and production:** Our products are recyclable and have a long service life. They contribute to circular economy.

**Decent work and economic growth:** We help beekeepers to become more efficient and we help farmers to harvest bigger yields.

**Industry, innovation and infrastructure:** Through sustainable industrialization and education, we foster the knowledge about bees and about each beekeeper's individual hives.

ACCORDANCE AND COMPLIANCE

The usage of the SDG logo & icons complies with the **official SDG Guidelines**. The impact model and the action descriptions have been elaborated in a workshop supported by the **W.A. De Vigier Foundation** and **ecos AG**.
